Art Unit: 1648

DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-24, drawn to dengue monoclonal antibodies.

Group 2, claim(s) 25, drawn to pFAV CMV-dhfr vector.

The inventions listed as Groups 1-2 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

In group 1, the special technical feature is the ability to bind Dengue virus. The vector of group 2 lacks this feature.

Group 1 contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

5H2 (CDR seqs 3, 5, 7, 11, 13, and 15)

5A7 (CDR seqs 19, 21, 23, 27, 29, and 31)

3C1 (CDR segs 35, 37, 39, 43, 45, and 47)

3E4 (CDR segs 51, 53, 55, 59, 61, and 63)

7G4 (CDR segs 67, 69, 71, 75, 77, and 79)

Page 3

Art Unit: 1648

5D9 (CDR seqs 83, 85, 87, 91, 93, and 95)

1A5 (CDR segs 99, 101, 103, 107, 109, and 111)

2H7 (CDR seqs 115, 117, 119, 123, 125, and 127)

2H5 (CDR seqs 131, 133, 135, 139, 141, and 143)

3A2 (CDR segs 147, 149, 151, 155, 157, and 159)

1B2 (CDR segs 163, 165, 167, 171, 173, and 175)

1A10 (CDR seqs 179, 181, 183, 187, 189, and 191)

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species 5H2, claim 23

Species 1A5, claim 24

The following claim(s) encompass multiple species: 1-22.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The expression "special technical features" is defined in PCT Rule 13.2 as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art. Whether or not any particular technical feature makes a "contribution" over the prior art, and therefore constitutes a "special technical feature," should be considered with respect to novelty and inventive step.

The technical feature that the species have in common is that they are human or chimp monoclonal antibodies which bind or neutralize dengue virus. However, monoclonal antibodies which bind or neutralize dengue virus are taught in the prior art, see for example Pupo-Antunez et al. Recombinantly produced human monoclonal antibodies are also taught in the prior art, see for example Kellerman et al. It would have been obvious to make a human anti-dengue monoclonal antibody similar to the mouse monoclonal antibody of Pupo-Antunez, to obtain a protective anti-dengue antibody which is tolerated by humans, using a method such as taught by Kellerman. Therefore the unifying technical feature is not inventive, and does not constitute a special technical feature. In the absence of a unifying special technical feature, each species is defined by the unique antibody-binding structure described by a set of CDRs.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

Art Unit: 1648

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary E. Mosher, Ph.D. whose telephone number is 571-272-0906. The examiner can normally be reached on varying dates and times; please leave a message.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
